CHESHIRE mouldings
Love the home you're in

This is **Cheshire Mouldings 2019 Merchant Technical Product Guide** specifically designed to support and help you.

Last year we launched 3 new divisions across

Skirting and Architrave, Sheet Material and Handypacks.

We have expanded our the number of Doors and varieties to our ranges and we have refreshed our Stairparts ranges. All this along with our very comprehensive choice of excellent Mouldings, Decking, and Joinery.

57 Technical Information

4 Contemporary Stairparts

5 Clarity - Combining toughened glass panels with classic designed oak handrails and either chrome or nickel panel brackets, the Clarity glass provides the illusion of a much larger room.

6 Reflections - This beautifully engineered collection of easy to install stair parts creates real visual intrigue by casting shadows and reflections that are as unique and individual as you.

7 Iron - Our Iron collection will balance the timeless luxury of classic materials with versatile modern designs to fit any home. Well engineered and easy to install.

8 Axxys® Evolution - This exquisite range blends the beauty of reflective metallic detail with the gorgeous organic warmth of high quality timbers. This range combines modern materials with traditional styling.

10 Benchmark Solo - This range is one of a kind. The clean lines in this collection draw your eye to the beautiful metallic detail that blends contemporary and traditional styles to deliver a truly unique finish.

11 Rail in a Box/Wall Mounted Handrails - Offering a stylish range of solid timber handrails in a choice of pre-finished pine and oak or white primed, ready for you to paint or stain. Complete the look of your handrail with end caps to add a contemporary or detailed finishing touch.

12 Stairklad - A quick and easy way of providing weary old stairs with a brand new look. This clever range of fully-finished stair flooring is made with oak veneers, making it the perfect complement to solid oak flooring in hallways and other rooms.

Contemporary Clarity

- Glass Panels & Brackets
- Spindles
- Handrails & Baserails
- **Our Clarity Glass can be used also with either our Benchmark or Axxys® Evolution ranges**

Stairklad is the perfect solution to transform the look of your tired old staircase into a solid oak masterpiece.

It's pre-lacquered and easy to install as it simply glues to your existing staircase.
Extend the look and feel of your oak laminate flooring up your stairs!

1 & 3 Tread Kits Available
1 Tread Kit includes -
1x tread & 1x riser

Easy to install

1. Fit packers and risers

2. Fit treads

3. Repeat for each step until complete

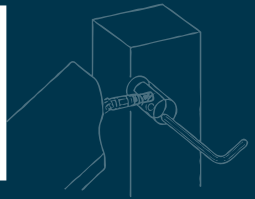
Universal handrail to newel post fixing kit

- Suitable for staircase and landings
- No need for lots of different angled fixing kits
- Secure fastening solution



Have a look at our 'how to' video giving you a step by step guide showing you how easy it is to install the handrail to newel post fixing kit.

To view the video visit us online at
www.cheshiremouldings.co.uk/downloads/videos/

Manor
Engineered Oak Flooring

Our engineered oak flooring has a real wood layer board construction which gives the end user a strong, durable floor which looks great and is easy to fit. Engineered flooring also includes a 4 sided v-groove and is suitable for underfloor heating.

5G Barlock system is fast – assembly is 25% faster! Fit it yourself! It's easy to dismantle and lay again so there's no need to be a specialist!

Stable construction

The flooring is not one board, but three layers of real wood arranged in a modern cross construction.

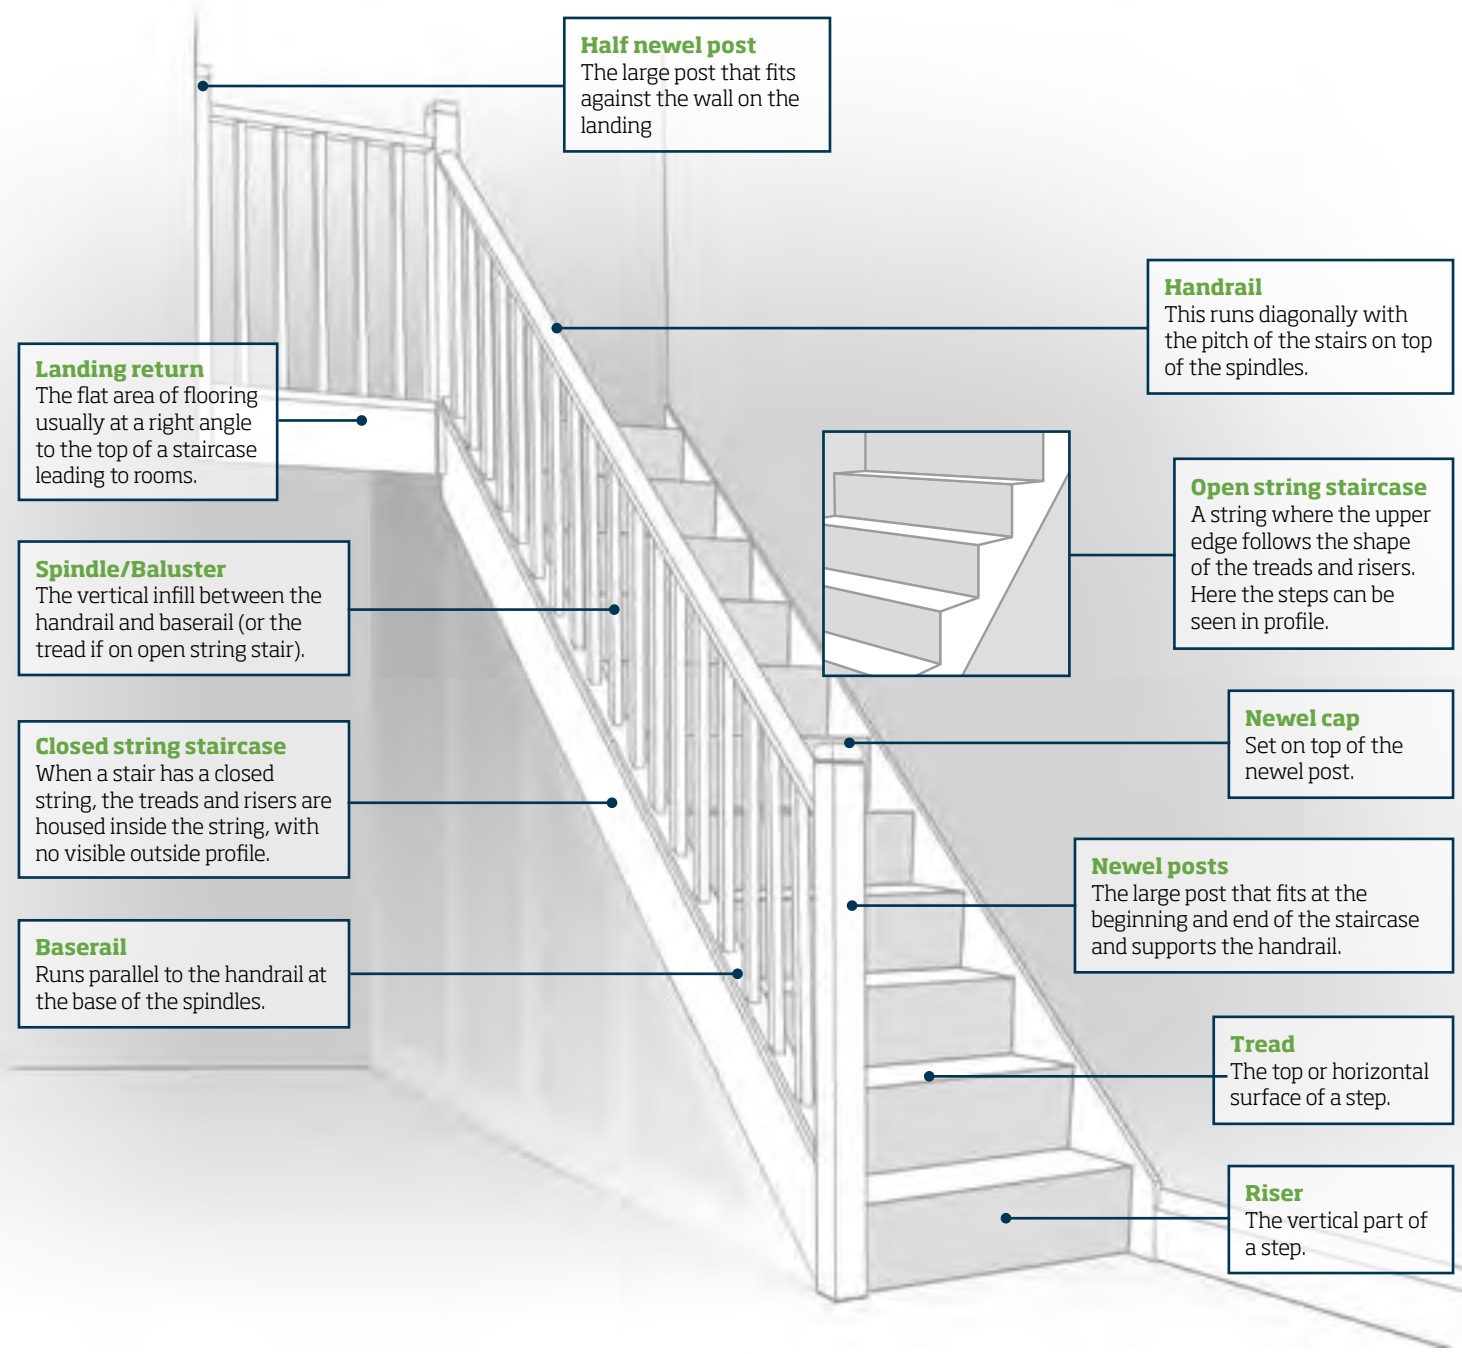
Stairparts
Terminology



Half newel post
The large post that fits against the wall on the landing

Handrail
This runs diagonally with the pitch of the stairs on top of the spindles.

Landing return
The flat area of flooring usually at a right angle to the top of a staircase leading to rooms.

Open string staircase
A string where the upper edge follows the shape of the treads and risers. Here the steps can be seen in profile.

Spindle/Baluster
The vertical infill between the handrail and baserail (or the tread if on open string stair).

Newel cap
Set on top of the newel post.

Closed string staircase
When a stair has a closed string, the treads and risers are housed inside the string, with no visible outside profile.

Newel posts
The large post that fits at the beginning and end of the staircase and supports the handrail.

Baserail
Runs parallel to the handrail at the base of the spindles.

Tread
The top or horizontal surface of a step.

Riser
The vertical part of a step.

Keeping it simple

Staircases may be all sorts of sizes and arrangements to suit different properties and spaces that they need to occupy, but the main parts which go together to make any staircase are fairly common.

We're here to help you plan and understand what's needed, so here's a guide to the various parts that make up a staircase.

If you have any queries please call our technical helpline on

0800 085 3475

Balustrade
The group name given to a completed build of handrails, baserails, newel posts, spindles and newel caps.

Bullnose Step
This tends to be the bottom step of the staircase with either one or both ends having a rounded corner.

Curtail Step
A decorative step at the bottom of the staircase which usually houses the volute and volute newel turning for a continuous handrail.

Going
This is the horizontal measurement between the face of the first step and last riser.
The measurement is taken from face of rise to face of rise and should be at least 220mm for domestic use.

Nosing
The edge of the tread which protrudes over the face of the riser and the cut string.

Over-The-Post Handrail system - continuous fix
Connecting straight lengths of handrail to fittings and ramps to take it over the top of the Newel turnings to make a continuous handrail.

Pitch
The angle measurement taken between the pitch line and the horizontal.

Pitch Line
The notional line connecting the nosings of all the treads in a staircase.

Rake
The pitch of the stairs.

Staircase
The stair structure as a whole.

Stairway/Stairwell
The planned space for the stairs.

Step
The combination of one tread and one riser.

String Margin
The distance between the top of the string and the pitch line measured at 90° to the pitch line.

Wall String
The string of a staircase fixed flush to the wall.

Winders
A series of steps which are narrower at one end that are used to change the direction of a staircase through 90° or 180°.

Installation

Regulations & Standards

Timber stairparts from Cheshire Mouldings have been independently tested.

This means that they conform fully to the domestic requirements laid down by UK Building Regulations Part K, relating to guarding and resistance to horizontal force.

Relevant British Standards for compliance are BS585 Part 1 1989 and AMD 6510, concerning wooden stairs and their fixings; BS5395 Part 1 2010 about straight stairs; and BS6180 2011 with its code of practice for protective barriers.

Domestic

As stated, the Cheshire Mouldings balustrade systems conform to domestic standards as set out in Building Regulations Part K.

This asserts that "The guarding should be able to resist a horizontal force of 0.36kN for each metre of length if it guards a private stairs".

Cheshire Mouldings spindles have also been tested in accordance with BS610.

Further regulations

Private Stairs are those for use in a single private dwelling and have a maximum rise of 220mm and a minimum going of the same 220mm.

Assembly Stairs or institutional stairs serve where a significant number of people gather.

The maximum permitted rise is 150mm, the minimum going 280mm.

All Other Stairs must have a maximum rise of 190mm and a minimum going of 250mm.

Approved Document M deals with access and facilities, plus maximum rise of stairs, for disabled people.

Rise and Going relationship is detailed in Approved Document K, which informs you that twice the rise plus the going (2R+G) should be between 550mm and 700mm.

Pitch is the angle between the pitch line, or notional line connecting nosings, and the horizontal. Regulations state that the maximum pitch of domestic stairs must be 42 inches, semi-public stairs such as in factories and offices must be a maximum 38 inches, with stairs in fully public places a maximum 33 inches.

Handrails are governed by Approved Document K. Flights of stairs must have a handrail on at least one side if they are under one metre wide and on both sides if they are a metre wide or bigger.

Handrails are not required beside the bottom two steps.

Handrail heights are 900mm minimum for domestic stairs and landings. but in public areas the handrail heights must be 900mm on stairs and 1100mm

on landings.

Balustrade openings are also subject to Building Regulations. No opening should allow the passage through of a 100mm sphere.

Finishing off your stairparts

A variety of applications

There are many available options for finishing off your stairparts. The most commonly used are wood stains or dyes, protective wood stains, paint, varnish, oils, French polishing, and, for coarse grained wood, liming.

Wood stains or dyes

Staining penetrates the wood and will enhance the colour. It can also neutralise natural colour variations in the timber. Quick drying, stains or dyes are normally rubbed in along the grain with a cloth. Be aware that they will not seal the wood, so varnishing or polishing will be required as well.

Varnish

There are clear, matt, satin and gloss varnishes, plus tinted versions, all providing you with a heat and water resistant, durable finish needing very little maintenance. Coloured varnishes, however, do not penetrate the wood, so add one or two coats of clear varnish to help prevent colour loss.

Liming

Liming – unslaked lime and water – comes into its own for coarse grained woods such as oak. When dry, it needs rubbing down with glasspaper, then coating with French polish, finally a coating of white polish. An easier method involves mixing white matt emulsion with water, to about the consistency of milk, then brushing it on before sealing with two coats of satin varnish. Easily applied liming wax is also available.

Protective wood stains

Unlike standard wood stains or dyes, the protective variety seals the wood. Normally applied with a brush and because it is quick drying, further coats can be applied at approximately two-hourly intervals: but check the manufacturer's instructions.

Oils

You can use oils to seal hardwood – not recommended for softwoods as they discolour and dirty too easily. There's plenty of choice and application is straightforward, either by cloth or brush. Some will accept varnish for protection.

Paint

New timber needs a coat of primer and at least one application of undercoat before the topcoat of gloss is added. Use what is known as a knotting solution on any live knots and resinous areas to prevent seepage through on to the finished surface.

French Polish

Layers of French polishing, a mix of alcohol and shellac, will provide an excellent gloss finish, although it is easily scratched and damaged by liquids or anything hot. Two-part plastic coating is a more hardwearing alternative, designed to provide resistance to scratches, liquids and heat.

A guide to types & finishes

Only the best quality timber

Cheshire Mouldings uses best quality timber throughout to create beautiful products that will transform any living space. You can select from a wide range of woods to provide ideal serviceability and appearance. Summarised here are the main ones.

Red Pine

Pinus Sylvestris L. Widely-used Red Pine is a species native to Scandinavia. This is a creamy white to yellow sapwood with a yellow or reddish brown resinous heartwood, accepting paint, stain or varnish exceptionally well. The average weight is 510 kilograms per cubic metre.

Western Hemlock

Tsuga Heterophylla Sarge. Coniferous evergreen Western Hemlock is a non-resinous softwood from the west coast of Canada. It is pale brown, straight grained and of even texture, ideal for painting, staining, varnishing or polishing. The average weight is 500 kilograms per cubic metre.

White Oak

Quercus Alba Quercus Robur. There are around 600 varieties of the Quercus or white oaks, found across Europe and North America. This is a straight grained medium to coarse textured hardwood, coloured from pale, yellowish brown to light brown. It stains and polishes well and can be limed. The average weight is from 720 to 760 kilograms per cubic metre.

Looking after your timber.

It is important that timber is left in the room where it is to be used, or a room with similar humidity, for at least two days to avoid post-fitting shrinkage or expansion. Wood exposed to heat will shrink. Exposed to moisture it will expand.
It is just as important to seal your timber once it has been installed, by painting, staining or varnishing.

- **Note that because timber is a natural product there can be minor colour variation between pieces.**

freephone 0800 085 3475

Decking
Installation

Regulations & Standards

Outside balustrade systems of all timber types from Cheshire Mouldings have been independently tested for conformity with the relevant Building Regulations in the UK.

All Cheshire Mouldings balustrade systems meet the standards laid down for domestic use. BS6399 Part 1 1966, Loading for Buildings.

A set of European Union regulations for biocidal products are now in place as well, meant to protect people, animals and articles against harmful organisms contained in such products. This is Regulation (EU) 528/2012.

Domestic Settings

Domestic-use balustrades, including stairs and landings, must resist a minimum horizontal, uniformly distributed line load of 0.36kN/m; a uniformally distributed infill load of 0.5kN/m2; and a point load to part of the infill of 0.25kN.

Decks that are 600mm or more above ground require balustrades to conform to the same capability of the heavier loadings of commercial settings.

Raised domestic and light commercial systems have increased requirements. Light commercial means for areas such as offices, hotels and public houses. Here, a balustrade should resist a minimum horizontal, uniformly distributed line load of 0.74kN/m; a uniformally distributed infill load of 1.0kN/m2; and a point load to part of the infill of 0.5kN.

For heavy commercial settings - where many people could congregate and there might be overcrowding - the balustrade should be set at 900mm on stairs and 1100mm for landings and horizontal guarding. Balustrades in these environments have to resist a minimum horizontal, uniformly distributed line load of 1.5kN/m; a uniformally distributed infill load of 1.5kN/m2; and a point load to part of the infill of 1.5kN.

Trade Association Membership

Cheshire Mouldings is a full member of the Timber Decking and Cladding Association (TDCA). This technical and advisory trade organisation provides expert guidance on materials and procedures to ensure high quality decking and associated structures.

Third-party quality assurance safeguarding is operated on behalf of the TDCA. Under the Deck-Mark Certification Scheme, which is based on ISO 9000, Cheshire Mouldings products have been confirmed as complying with best-practice guidance and the relevant British Standards.

Deck-Mark Plus is an extension to the scheme, applied to any products which have an additional performance rating as per BS EN ISO14001:2004 Environmental Management and BS EN ISO 9001:2000 Quality Management.

All registered trade names and trade marks are recognised and respected.

DeckMark+ Performance Rated PRODUCT

Finishing

Treatment & Maintenance

Outdoor balustrade and decking supplied by Cheshire Mouldings is of superior quality. Once you have fitted and fixed, you need to give the product best possible treatment and then maintain it in order to make sure that it remains splendidly attractive for as long as possible.

With the installation complete, you may want to apply a deck cleaner to remove any dirt or grease. This will brighten the timber as well.

Hardwood Balustrades

Typically, external balustrades from Cheshire Mouldings are manufactured from Sapele, a striking dark hardwood similar in colour to mahogany.

Although quite tough, any untreated timber exposed to the weather needs to be protected.

To protect and enhance your balustrade, apply a proprietary clear water repellant, semi-transparent seal or a decking oil. First make sure that the balustrade is dry - test by sprinkling drops of water over the surface and if the wood does not absorb the moisture let it dry out and retest before starting the application.

Apply an end-seal preservative to any surface that has been exposed by drilling or cutting.

CALL Any questions? Please call our technical helpline freephone 0800 085 3475

FIT Find a comprehensive range of fitting guides at cheshiremouldings.co.uk

Balustrade Maintenance

For all balustrade components, hardwood or softwood, follow carefully the seal, stain or oil recommendations of the manufacturer and test on an off-cut or hidden surface.

Cheshire Mouldings recommends that all components should be recoated at least annually.

Use a cloth, slightly heated water and a mild detergent for items such as glass and alloy posts or rails. Do not polish or employ abrasive cleaners and scourers.

Softwood Decking

As standard, timber decking materials from Cheshire Mouldings are made from softwood Scots Pine. There is a natural tendency as the timber weathers for there to be minor surface checking and splitting, caused by the variation in moisture content and the effects of wetting and drying out. These surface defects do not harm the decking structure.

As with balustrades, decking should have a proprietary clear water repellant, semi-transparent seal or decking oil applied, for the sake of protection and enhancement. Make sure that the decking is dry before you start. Test by sprinkling drops of water over the surface and if the wood does not absorb the moisture let it dry out and retest before carrying out
the work.

Note that newly-laid decking should not have any finish applied until it has weathered properly.

Add an end-seal preservative to any surface that has been exposed by drilling or cutting.

Decking Maintenance

The need for cleaning will depend on how much the deck is used and the proximity of trees and foliage, of course. At least once per season, maybe twice, take a stiff broom to the wood, dislodging algae and reducing the risk of the area becoming slippery.

It is recommended that you hose down the deck thoroughly twice per year, if necessary employing a deck cleaner and brightener.

Surface resin is best removed with a chisel, then you will need to recoat the area. Use a blade to remove any debris build-up in the grooves between the boards, as these gaps are needed for drainage and air circulation. Check all fixings, repunch nail heads and tighten screws as and where necessary.

Pressure Treated

Softwood outdoor balustrade components are treated to make them last for 15 years. They are pressure treated with
Tanalith E. Initially, this has a green appearance, but it weathers to a honey brown before eventually fading to grey. It can be painted or stained to match any outdoor colour scheme.

Nº1 IN THE INDEPENDENT TRADE

Who Are We?

We are the Number 1 Independent Manufacturer and Supplier of Stairparts, Decking Balustrading and Decorative and Architectural Mouldings.

We have recently launched new divisions in Doors, Flooring, Skirting and Architrave, Sheet material and Handy packs.

Cheshire Mouldings was founded in 1988 in Warrington, where we stayed for 10 years before relocating to our current site in 1998. The Carney family founded the company with a simple idea in mind "To be the best".

What Makes Us Special?

Our first class service, outstanding quality and extensive product range set Cheshire Mouldings apart from other companies in our sector. We always aim to be the best. And we believe we are.

Our customers know that whatever they buy from Cheshire Mouldings they are going to receive a top quality product. This confidence and trust has been built up over a number of years and is very important to us. We also carry a large amount of stock, which means we can offer our customers a fast, reliable service that can deliver within five working days.

Over 30 Years of Experience

With over 30 years of leading the way in fittings and fixtures you'd expect us to have gathered a huge amount of experience, and we have. We've supplied small independent businesses for many years and during this time we've built some great relationships and had many happy customers.

Over the last 5 years we have also started to supply a number of national retail giants and this has blessed us with a wealth of experience with meeting the demands of all sized businesses and we value them all, however large or small.

Terms & Conditions / Certificates

Wherever possible, Cheshire Mouldings products are manufactured from solid timber, although in a small number of cases we do laminate & on occasion finger-joint pieces in order to enhance a products strength /or stability or to reduce environmental impact. Timber is a natural material & colours may vary between components.

Cheshire Mouldings fully support & are able to supply FSC® certified products originating from responsibly managed forests. We are also able to supply PEFC certified products from sustainable sources, together with products certified under the BM TRADA Forest Products certification scheme.

Detail of which products are certified under each scheme are listed in this brochure & on your invoice.

All products are subject to availability. The certification status of any product may change

As timber is a natural product, colours can vary between different components in our range.

We use metric dimensions for all the products listed in this brochure.

All prices are exclusive of VAT.

All prices were correct at the time of going to press.

Whilst every care has been taken to ensure the information contained within this price list is accurate, with our ever increasing product offering errors may occur. Cheshire Mouldings reserve the right to amend prices & details at any time. Our price list will be updated on a regular basis.
