Give your walls the wow factor with our quick and easy to fit Wall Panels Kits and Acoustic Slat Wall Panels

Smoked Oak Acoustic Slat Wall Panel (WPKT11) - Page 32

Traditional Shaker Wall Kit (WPKT6) - Page 27

## Welcome to our Product Guide

The Cheshire Mouldings range offers everything the professional installer needs to complete stunning home improvement projects with ease.

In this guide, you'll find all of our new stairparts, designs and finishes. Our Reflections and Iron ranges are available in ready-to-paint pine to offer more choice and value to you and your customers. Plus, we've added more of the popular Wall Panel Kits and Acoustic Panels, the perfect DIY solution for a house refurbish.

Our fitting instructions and videos have been developed by installers to provide everything you need to complete almost any installation. Simply scan the QR codes and start building.

### How to navigate

Your guide to the symbols used in this brochure

Throughout this guide, you'll notice symbols to help you plan a project based on difficulty level and budget. The thumb symbol gives you an idea of the level of skill required to install each range. One thumb indicates the easiest items to fit for a competent DIYer. While three thumbs is ideally suited to a skilled tradesman. The pound symbol shows the estimated cost at Recommended Retail Price for a 12-tread staircase and for a 1.8 metre run of decking. All prices correct at the time of going to print. Prices include VAT.

Installation guide

Wall mounted handrail Competent DIY'er	Benchmark, Reflections & Iron Competent DIY'er / Skilled tradesman	Continuous Handrail Mortise & Tenon Skilled tradesman

Budget guide

Under £250	£500 - £1000	£1500 - £2000

## Measurements

Measurements given are taken from the longest dimensions of the cross section of that particular style of moulding. The first dimension is the largest followed by the shortest. The third dimension is the overall length of the moulding.

Some mouldings have dimensions that significantly change the shape of the cross section (D & E). For ease of ordering, these will have the dimensions shown on the corresponding line drawing and will be marked accordingly.

Where mouldings have the same cross section but are available in different sizes we only show a single size for illustrative purposes.

All sizes are approximate.

# Handy Packs

## **PSE's**

Pine PSE are highly practical and versatile planed timber. Smooth and square-edged for a professional finish, ideal for boxing in and use as support battens. Perfect for those simple DIY jobs.

61

## **Sawn & Treated**

CLS timber can be used in timber-frame home construction, including carcassing, stud walls, internal partition walls and framing. Our treated timber can be used for a variety of outdoor uses.

62

## **Skirting & Architrave**

Pine Skirting can add incredible detail to a room as well as hide any unwanted cables. Smooth surface allows easy painting, varnishing and staining. Architrave is a decorative piece of timber which surrounds doorways and door frames to add extra style and personality throughout the house.

62

# Porches, Gallows & Pineboard

## Porches & Gallows

115

These stylish porch canopies and accessories will transform the exterior of any home. They are easy to install, pre-drilled, ready to paint, stain or varnish. Choose from flat roof or apex designs, with an optional finial for a finishing touch. Manufactured to a high standard and tested by an independent structural engineer.

Both flat roof and apex designs are now available in pine or NEW white primed.

## Softwood EGP Boards

116

Softwood edge glued boards can be used for a range of joinery projects including shelving, furniture or general DIY jobs. Boards can be easily fixed using adhesive, pins, screws or nails. Once sanded, they can easily be painted, waxed or varnished.

Porches

All our porches and gallow components are manufactured to a high standard and tested by an independent structural engineer.

## We are the Number 1 Independent Manufacturer and Supplier of Stairparts, Decking Balustrading & Decorative and Architectural Mouldings.

Founded in 1988 in Warrington, Cheshire Mouldings stayed for 10 years before relocating to our current site in 1998. The Carney family founded the company with a simple idea in mind "To be the best".

### What Makes Us Special?

Our first class service, outstanding quality and extensive product range set Cheshire Mouldings apart from other companies in our sector. We always aim to be the best. And we believe we are.

Our customers know that whatever they buy from Cheshire Mouldings they are going to receive a top quality product. This confidence and trust has been built up over a number of years and is very important to us. We also carry a large amount of stock, which means we can offer our customers a fast, reliable service that delivers within five working days.

### Over 30 Years of Experience

Well after over 30 years of leading the way in fittings and fixtures you'd expect us to have gathered a huge amount of experience, and we have. We've supplied small independent businesses for many years and during this time we've built some great relationships and had many happy customers.

Over the last 5 years we have also started to supply a number of national retail giants and this has blessed us with a wealth of experience with meeting the demands of all sized businesses and we value them all, however large or small.

Flat Roof Porch  
Page 115

### Filling joints for MDF panelling strips

When using mdf strips for panelling it is tricky to fill a butt joint gap with filler. If you apply a small chamfer to the ends of the strips it is easier to fill, and after sanding, will be less prominent.

### Fitting MDF panelling to uneven adjacent walls

If the walls adjacent to the feature panel wall are uneven, simply place a strip onto the feature wall and up against the uneven adjacent wall, checking the strip is vertical using a spirit level. Temporarily fix into position with a nail gun. Measure the biggest gap between the adjacent wall and the strip. Cut a block from an offcut to the same size as the largest gap. Then take the block and offer up to adjacent wall at top of the strip and place a pencil next to the side of the block. Slowly drag the block with the pencil down the adjacent wall so you draw a line down the strip. Remove strip from wall and cut along line using either a hand or jigsaw. Offer strip up to wall and there should be no gaps between strip and adjacent wall when strip is vertical.

### Finishing

Once all joints and gaps have been filled and sanded down you are now ready to paint. Apply primer on timber and mdf panelling to seal it. It will also help the next layer of paint adhere better. Lightly sand with a fine grit (120) sandpaper. Apply your chosen paint using a brush and/or roller. Apply second coat if needed.

## Regulations & Standards

Timber stairparts from Cheshire Mouldings have been independently tested.

This means that they conform fully to the domestic requirements laid down by UK Building Regulations Part K, relating to guarding and resistance to horizontal force.

Relevant British Standards for compliance are BS585 Part 1 1989 and AMD 6510, concerning wooden stairs and their fixings; BS5395 Part 1 2010 about straight stairs; and BS6180 2011 with its code of practice for protective barriers.

## Domestic

As stated, the Cheshire Mouldings balustrade systems conform to domestic standards as set out in Building Regulations Part K.

This asserts that "The guarding should be able to resist a horizontal force of 0.36kN for each metre of length if it guards a private stairs".

Cheshire Mouldings spindles have also been tested in accordance with BS610.

## Further Regulations

**Private Stairs** are those for use in a single private dwelling. The maximum permitted rise is 220mm and a minimum going of the same 220mm.

**Assembly Stairs** or institutional stairs serve where a significant number of people gather. The maximum permitted rise is 150mm, the minimum going 280mm.

**All Other Stairs** must have a maximum rise of 190mm and a minimum going of 250mm.

Approved Document M deals with access and facilities, plus maximum rise of stairs, for disabled people.

**Rise and Going** relationship is detailed in Approved Document K, which informs you that twice the rise plus the going (2R+G) should be between 550mm and 700mm.

**Pitch** is the angle between the pitch line, or notional line connecting nosings, and the horizontal. Regulations state that the maximum pitch of domestic stairs must be 42°, semi-public stairs such as in factories and offices must be a maximum 38°, with stairs in fully public places a maximum of 33°.

**Handrails** are governed by Approved Document K. Flights of stairs must have a handrail on at least one side if they are under one metre wide and on both sides if they are a metre wide or bigger.

Handrails are not required beside the bottom two steps.

**Handrail heights** are 900mm minimum for domestic stairs and landings, but in public areas the handrail heights must be 900mm on stairs and 1100mm on landings.

**Balustrade openings** are also subject to Building Regulations. No opening should allow the passage through of a 100mm sphere.

## A Variety of Applications

There are many available options for finishing off your stairparts. The most commonly used are wood stains or dyes, protective wood stains, paint, varnish, oils, French polishing, and, for coarse grained wood, liming.

### Wood Stains or Dyes

Staining penetrates the wood and will enhance the colour. It can also neutralise natural colour variations in the timber.

Quick drying, stains or dyes are normally rubbed in along the grain with a cloth. Be aware that they will not seal the wood, so varnishing or polishing will be required as well.

### Varnish

There are clear, matt, satin and gloss varnishes, plus tinted versions, all providing you with a heat and water resistant, durable finish needing very little maintenance.

Coloured varnishes, however, do not penetrate the wood, so add one or two coats of clear varnish to help prevent colour loss.

### Liming

Liming – unslaked lime and water – comes into its own for coarse grained woods such as oak. When dry, it needs rubbing down with glasspaper, then coating with French polish, finally a coating of white polish.

An easier method involves mixing white matt emulsion with water, to about the consistency of milk, then brushing it on before sealing with two coats of satin varnish. Easily applied liming wax is also available.

### Protective wood stains

Unlike standard wood stains or dyes, the protective variety seals the wood.

Normally applied with a brush and because it is quick drying, further coats can be applied at approximately two-hourly intervals: but check the manufacturer's instructions.

### Oils

You can use oils to seal hardwood – not recommended for softwoods as they discolour and dirty too easily.

There's plenty of choice and application is straightforward, either by cloth or brush. Some will accept varnish for protection.

### Paint

New timber needs a coat of primer and at least one application of undercoat before the topcoat of gloss is added.

Use what is known as a knotting solution on any live knots and resinous areas to prevent seepage through on to the finished surface.

### French Polish

Layers of French polishing, a mix of alcohol and shellac, will provide an excellent gloss finish, although it is easily scratched and damaged by liquids or anything hot.

Two-part plastic coating is a more hardwearing alternative, designed to provide resistance to scratches, liquids and heat.

Infill calculators for Reflections and Iron stair ranges.

1. How many Iron spindles will I need?

**On stairs -**  
Measure distance between posts and divide by 125.

**On landing -**  
Measure distance between posts and divide by 90.

2. How many glass panels will I need?

Tables below show min/max spans for Reflections panels for both stairs and landing.  
**Please note - any balustrade run longer than 2400mm between post centres will require an intermediate newel positioned at mid point.**

Reflections Stairs

Regulations & Standards

Outside balustrade systems of all timber types from Cheshire Mouldings have been independently tested for conformity with the relevant Building Regulations in the UK. All Cheshire Mouldings balustrade systems meet the standards laid down for domestic use. BS6399 Part 1 1966, Loading for Buildings.  
A set of European Union regulations for biocidal products are now in place as well, meant to protect people, animals and articles against harmful organisms contained in such products. This is Regulation (EU) 528/2012.

**Domestic Settings - Tested by FIRA**  
Domestic-use balustrades, including stairs and landings, must resist a minimum horizontal, uniformly distributed line load of 0.36kN/m; a uniformly distributed infill load of 0.5kN/m2; and a point load to part of the infill of 0.25kN.

Decks that are 600mm or more above ground require balustrades to conform to the same capability of the heavier loadings of commercial settings. Raised domestic and light commercial systems have increased requirements. Light commercial means for areas such as offices, hotels and public houses. Here, a balustrade should resist a minimum horizontal, uniformly distributed line load of 0.74kN/m; a uniformly distributed infill load of 1.0kN/m2; and a point load to part of the infill of 0.5kN.

**Heavy Commercial Settings**  
Where many people could congregate and there might be overcrowding - the balustrade should be set at 900mm on stairs and 1100mm for landings and horizontal guarding. Balustrades in these environments have to resist a minimum horizontal, uniformly distributed line load of 1.5kN/m; a uniformly distributed infill load of 1.5kN/m2; and a point load to part of the infill of 1.5kN.

Further Regulations

Cheshire Mouldings is a full member of the Timber Decking and Cladding Association (TDCA).  
This technical and advisory trade organisation provides expert guidance on materials and procedures to ensure high quality decking and associated structures.  
Third-party quality assurance safeguarding is operated on behalf of the TDCA.  
Under the Deck-Mark Certification Scheme, which is based on ISO 9000, Cheshire Mouldings products have been confirmed as complying with best-practice guidance and the relevant British Standards.  
Deck-Mark Plus is an extension to the scheme, applied to any products which have an additional performance rating as per BS EN ISO14001:2004 Environmental Management and BS EN ISO 9001:2000 Quality Management.  
All registered trade names and trade marks are recognised and respected.

Deck-Mark®, Deck-Mark Plus®, Celcure® AC-500.

## Treatment & Maintenance

Outdoor balustrade and decking supplied by Cheshire Mouldings is of superior quality. Once you have fitted and fixed, you need to give the product best possible treatment and then maintain it in order to make sure that it remains splendidly attractive for as long as possible.

With the installation complete, you may want to apply a deck cleaner to remove any dirt or grease. This will brighten the timber as well.

### Hardwood Balustrades

Although quite tough, any untreated timber exposed to the weather needs to be protected.

To protect and enhance your balustrade, apply a proprietary clear water repellant, semi-transparent seal or a decking oil. First make sure that the balustrade is dry - test by sprinkling drops of water over the surface and if the wood does not absorb the moisture let it dry out and retest before starting the application.

Apply an end-seal preservative to any surface that has been exposed by drilling or cutting.

### Balustrade Maintenance

For all balustrade components, follow carefully the seal, stain or oil recommendations of the manufacturer and test on an off-cut or hidden surface.

Cheshire Mouldings recommends that all components should be recoated at least annually.

Use a cloth, slightly heated water and a mild detergent for items such as glass and alloy posts or rails. Do not polish or employ abrasive cleaners and scourers.

### Softwood Decking

As standard, timber decking materials from Cheshire Mouldings are made from softwood Scandinavian Pine. There is a natural tendency as the timber weathers for there to be minor surface checking and splitting, caused by the variation in moisture content and the effects of wetting and drying out. These surface defects do not harm the decking structure.

As with balustrades, decking should have a proprietary clear water repellant, semi-transparent seal or decking oil applied, for the sake of protection and enhancement. Make sure that the decking is dry before you start. Test by sprinkling drops of water over the surface and if the wood does not absorb the moisture let it dry out and retest before carrying out the work.

Note that newly-laid decking should not have any finish applied until it has weathered properly.

Add an end-seal preservative to any surface that has been exposed by drilling or cutting.

### Decking Maintenance

The need for cleaning will depend on how much the deck is used and the proximity of trees and foliage, of course. At least once per season, maybe twice, take a stiff broom to the wood, dislodging algae and reducing the risk of the area becoming slippery.

It is recommended that you hose down the deck thoroughly twice per year, if necessary employing a deck cleaner and brightener.

Surface resin is best removed with a chisel, then you will need to recoat the area. Use a blade to remove any debris build-up in the grooves between the boards, as these gaps are needed for drainage and air circulation. Check all fixings, repunch nail heads and tighten screws as and where necessary.

### Pressure Treated

Softwood outdoor balustrade components are treated to make them last for 15 years. They are pressure treated with Celcure AC - 500. Initially, this has a green appearance, but it weathers to a honey brown before eventually fading to grey. It can be painted or stained to match any outdoor colour scheme.

Wherever possible, Cheshire Mouldings products are manufactured from solid timber, although in a small number of cases we do finger-joint pieces in order to enhance a products strength and/or stability or to reduce environmental impact. Timber is a natural material and colours may vary between components.

Cheshire Mouldings fully support and are able to supply FSC® certified products originating from responsibly managed forests. We are also able to supply PEFC certified products from sustainable sources.

Detail of which products are certified under each scheme are listed on your invoice.

All products are subject to availability. The certification status of any product may change.

As timber is a natural product, colours can vary between different components in our range.

We use metric dimensions for all the products listed in this brochure.

Whilst every care has been taken to ensure the information contained within this Trade Product Guide is accurate, with our ever increasing product offering errors may occur. Cheshire Mouldings reserve the right to amend prices and details at any time.

Our price list will be updated on a regular basis.

#### Returns Policy for Saleable Product

All returns to Cheshire Mouldings are subject to a restocking charge. The request for the return must be received within 14 days of delivery. The charge is the higher of £45 or 30% of the goods value.

Please note we cannot accept returns for 'customer order only' products. Cut Sheets, Glass Panels and Acoustic Panels can't be returned.

All orders refused due to late cancellation of the order are also subject to the restocking charge.

Cheshire Mouldings has a policy of continuous product development and improvement. Whilst information is correct at the time of going to press, we reserve the right to make changes without notice. E&OE.

FSC® certified products available upon request.

The mark of  
responsible forestry

FIRA tested. Details available on request.

**Supporting sustainable timber production**

Our products are not only beautifully made; they're also sustainably sourced. We are committed to supporting sustainable harvesting practices and responsible supply chains. We collaborate with our suppliers to ensure the highest standards are met.

**Committed to sustainable product construction**

We are constantly working to lower our carbon footprint and invest in environmentally friendly production techniques. A high proportion of our products are manufactured on our 150,000sq ft site in St. Helen's. We adhere to the UK Timber Regulations and follow a strict Environmental Code of Conduct.

**Proud of our certifications**

Most of our products are made from timber sourced in sustainable and responsibly managed forests. As well as quality, safety is also paramount at Cheshire Mouldings. We are members of the British Safety Council and ISO 9001 compliant. All of our stair parts and decking balustrades are tested to FIRA Gold Certification.
